HTML / CSS

Project 02 - Landing Page

Course Value: 20%

Due: February 28, 2020 - End of day (11:59pm)

Project Description:

The Landing Page Assignment is a project for creating a single link page where you can put up links to your other assignments and projects assigned to you in other courses. The links page will consist of a single custom designed HTML page with an external CSS style sheet.

Instructions:

The page must contain links to your major projects for your courses such as HTML, JavaScript, your group projects and your portfolio sites. For projects that do not yet exist use a "#0" link instead or use placeholder text such as "coming soon". Feel free to also make your Photoshop, Illustrator and Adobe XD projects that you wish to share available on this page as well (just make sure they have been exported into a web safe format).

The page will serve as your School Project landing page during and after the TWD Program. Your Instructors will look for and find your project links here.

At the end of the program you will be creating a full portfolio web site which is separate from this project.

Going forward all HTML projects (not assignments) will be required to be linked up on the landing page.

Try to organize the links into categories for easy navigation by users.

A suggested link organization is as follows:

- **HTML / CSS** > Project 01 (Country) | Project 03 (Business Brochure)
- **JavaScript** > Level 01 Project | Level 02 – Project
- **PHP** > Project
- **WordPress** > Project
- **External Client Project** > Link
- **Portfolio Site** > Link

Be creative with your design of the landing page, but keep the site functional and easy to use.

Landing Page Website Technical Requirements

- Website must be fully responsive
    - o   Website must be useable between screen sizes of 320px wide to 1920px wide
- Website must be coded in a mobile-first way (start with a small-screen mobile layout as the default layout and use "min-width" media queries for the larger screen layouts)

Notes:

- This page will replace the "index.html" file that is located in your root directory.
    - o   Your landing page should load when a user clicks your name from the TWD web site
    - o   If you are unsure of how to properly upload your landing page, please see your instructor for help.
- Do not forget to run your code through HTML and CSS validators before submission.

Marking Criteria:

- All instructions followed, and technical requirements met	5 marks
- Code quality	5 marks
- Design and usability	10 marks
- **Total**	**20 marks**

Late Project Policy:

- 5% per day up to a maximum of 30% of your total course mark
